## Footnotes:

- \* Time -- Time between message release and arrival of the S-wave at the location.
- \*\* MMI -- Modified Mercalli Intensity: a scale to measure ground shaking severity.
- \*\*\* For earthquakes deeper than ~15 km, the ShakeAlert Message may be sent before peak shaking reaches the surface.

Figure 1. ShakeAlert initial earthquake location (black dot). ANSS earthquake epicenter not available. Polygon approximates outer range for felt ground motion. If shown, red circle is front of peak shaking when the message was released\*\*\*. Shaking takes 10 s to expand from circle to circle.

Figure 2. Polygons show shaking intensity contours for the peak magnitude estimate. Shaking of MMI 3 or less is often not felt. ANSS earthquake epicenter not available.
